Daily evidence digest 17 February 2021

The daily evidence digest collates recently released reports and evidence – provision of these links does not imply endorsement nor recommendation.

Diagnostic tests, variants, effectiveness of Pfizer vaccine, a decision framework to guide social and movement measures

Peer reviewed journals featured:

- A review article on diagnostics for SARS-CoV-2 infections [here]
- Observational studies on:
  - SARS-CoV-2 re-infection risk in Austria [here]
  - Four SARS-CoV-2 sub strains and novel variants in the US [here]
  - Elective orthopaedic surgery during COVID-19 in the US [here]
- A survey of medical residents exposed to COVID-19 in Qatar [here]

Letters and correspondence discussed:

- COVID-19 vaccination for patients with cancer [here]
- Evaluating COVID-19 contact-tracing apps [here]
- Pooling methods for molecular assay samples [here]

Pre-peer review articles featured:

- The escape of SARS-CoV-2 variants B.1.351 (South Africa) and B.1.1.248 (Brazil) from antibody responses [here]
- Implementation of an reverse transcription-PCR assay to detect SARS-CoV-2 N501Y variants (Kent / UK, South Africa, Brazil) [here]
- Estimating real-world effectiveness of the BNT162b2 vaccine(Pfizer) in Israel [here]

Guidance and reports:

- The World Health Organization and OECD jointly published a five-step decision framework for calibrating social and movement measures during COVID-19 [here]
- The UK National Institute for Health and Care Excellence (NICE) published updated COVID-19 guidelines on:
  - Critical care in adults [here]
  - Delivery of systemic anticancer treatments [here]
  - Delivery of radiotherapy [here]
  - Hematopoietic stem cell transplantation [here]
News and blogs

- Is asymptomatic transmission in young people driving the current wave of the pandemic? [here](#)
