**Clinical Advisor, Western Sydney Integrated Care Program
Director, Dept of Diabetes & Endocrinology, Westmead Hospital
Clinical Professor, University of Sydney**

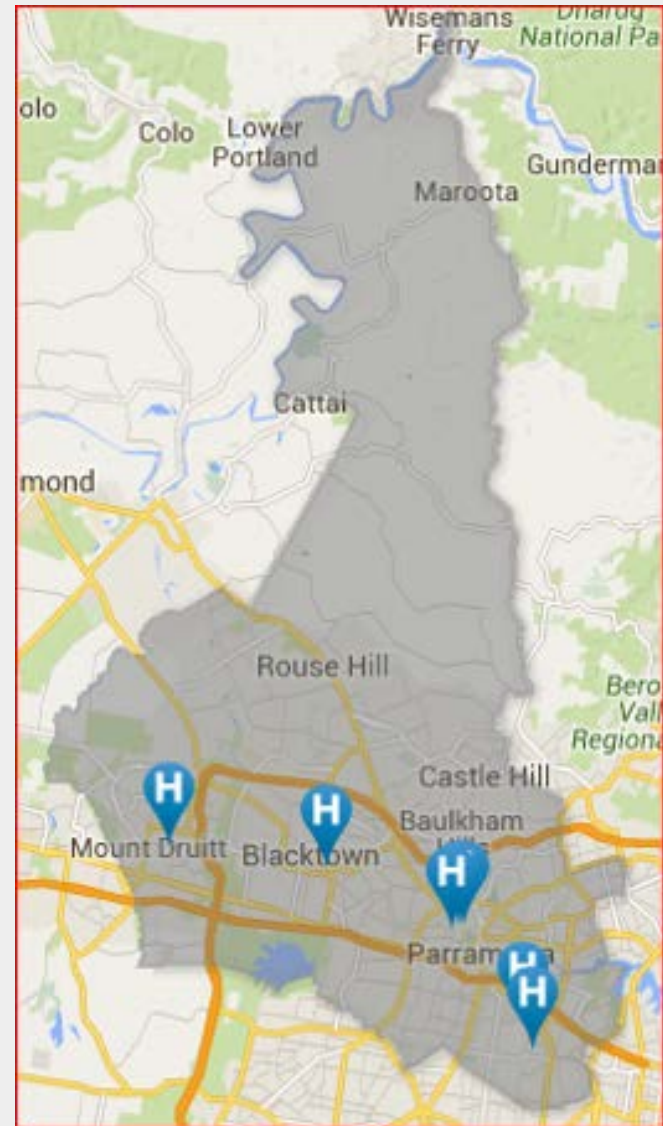

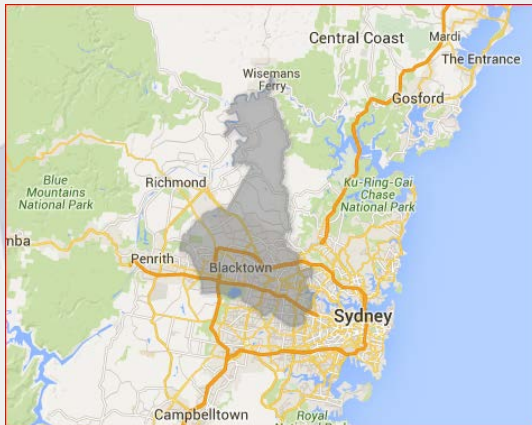

Western Sydney Integrated Care Program

NSW Health Investment in Integrated Care

Establish three LHD-led Integrated Care Demonstrators to run over four years, aimed at supporting large-scale transformation of integrated local health systems and testing initiatives prior to extension across the State.

WESTERN SYDNEY (WSLHD / WSPHN)

- 900,000 people
- 4 major Hospitals
- 1,100+ GPs (~320 practices)
- 1,300+ AHP
- 200+ Practice Nurses

Western Sydney PHN

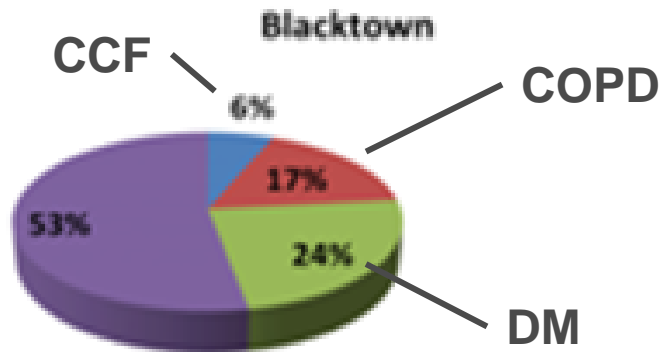

% with a long-term health condition 2013–14	42%
% overweight or obese 2011–12	60%
Deaths from potentially treatable conditions 2009-2011	~540 pa
% admitted to any hospital in the preceding 12 months 2013-14	9%
Potentially avoidable hospitalisation, chronic disease 2011-12	~9,800 pa

Western Sydney PHN (Access to Care)

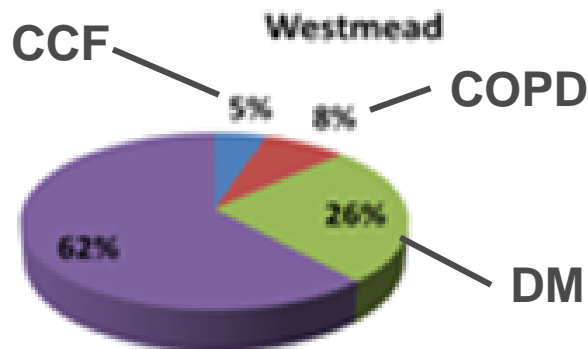

Saw a medical specialist in the preceding 12 months 2013-14	35%
Saw an allied health professional or nurse 2011-12	16%
Adults referred to a medical specialist who felt they waited longer than acceptable to get an appointment in the preceding 12 months 2011-12	21%
Went to hospital emergency department for own health in the preceding 12 months 2013-14	10%

Chronic disease is a significant driver of escalating preventable admissions in Western Sydney

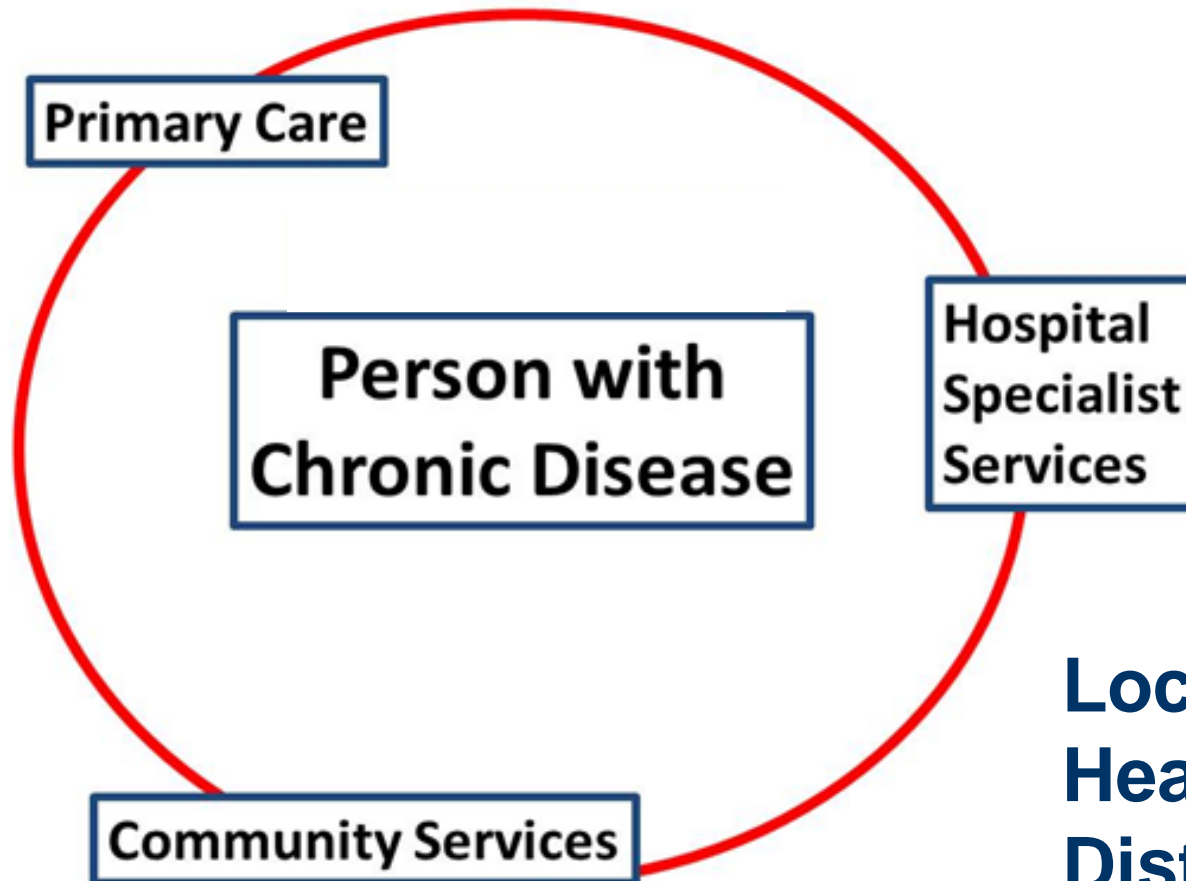

Blacktown	13/14 Total	% of Total Episodes
Episodes	27386	
PPH	4079	14.89

Westmead	13/14 Total	% of Total Episodes
Episodes	87013	
PPH	7727	8.88

Overview of Holistic Integrated Care Model

Triple Aims (Quadruple)

1

Aspirations:

- Improve people's experience of care
- Improve health of population
- Improve cost effectiveness

+ Improve healthcare provider experience and satisfaction

2

Patient register and risk stratification

3

Care interventions delivered by a multi-disciplinary team

- 1 Self-management
- 2 Care planning and MDT
- 3 Care navigation
- 4 Case management
- 5 ...

4

Key enablers

Patient engagement

Funding and incentives

Information technology and communications

Governance and quality improvement

Clinical engagement and redesign

WSICP Model of Care

For a cohort of patients:

- **identified at either GP and Hospital**
- **by Clinical Criteria (Cardiac, COPD, DM)**
- **with Participating GP/General Practice**

There will be an array of:

- **Services**
- **Systems**
- **Support**

Available to the patients and their treating teams:

- **to optimise their management in the community**
- **to reduce their need for hospital admission**
- **To improve communication and data sharing**

Registration and Risk Stratification

WSICP Registrants

COPD

CCF/Chest pain

3000 Subjects

T2DM HbA1c > 8

OR

Unstable diabetes requiring insulin

OR

Recent or current hospital admission related to diabetes, diabetic complications, high risk foot

Current/Past/Potential admission to hospital
GP in WSICP

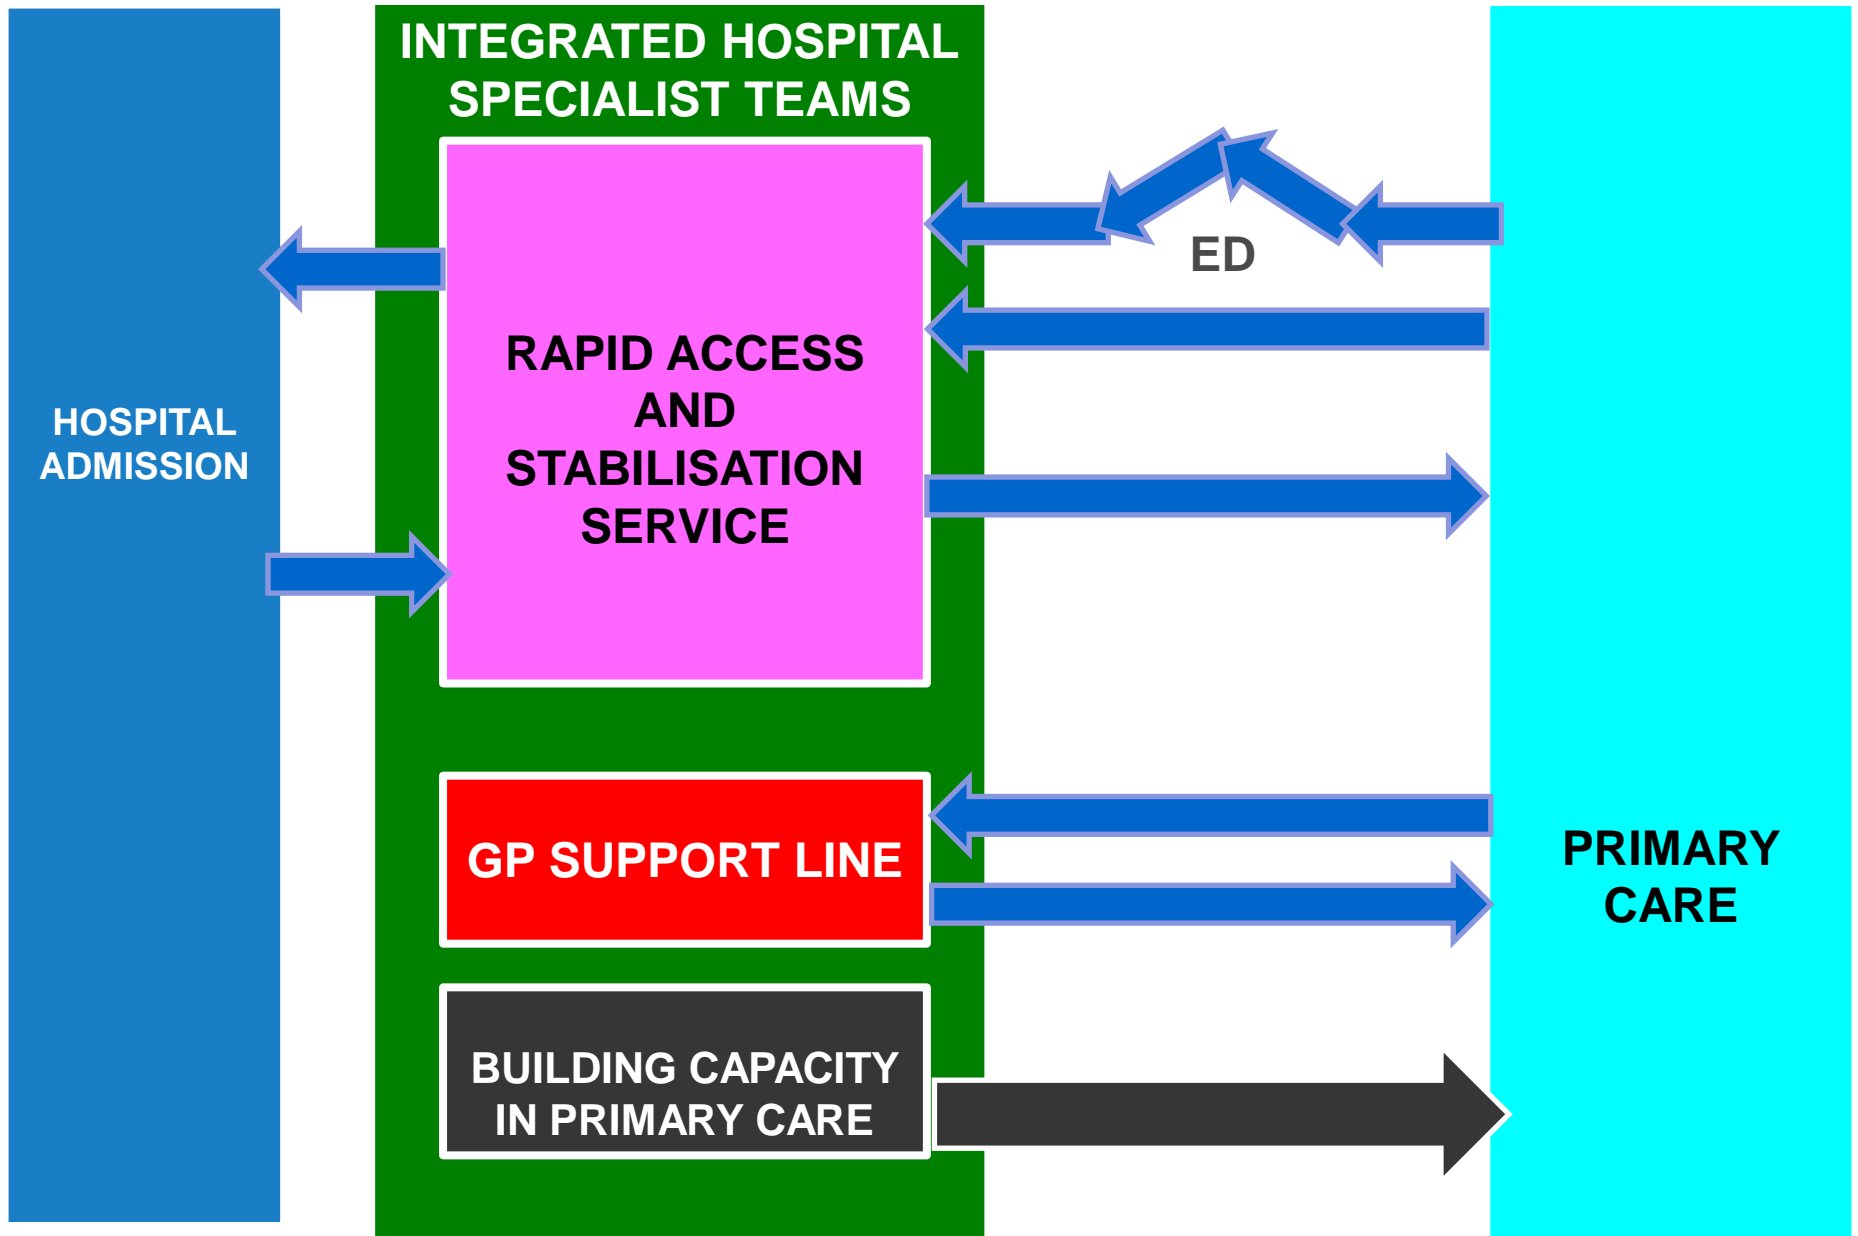

Care Interventions Multidisciplinary Team

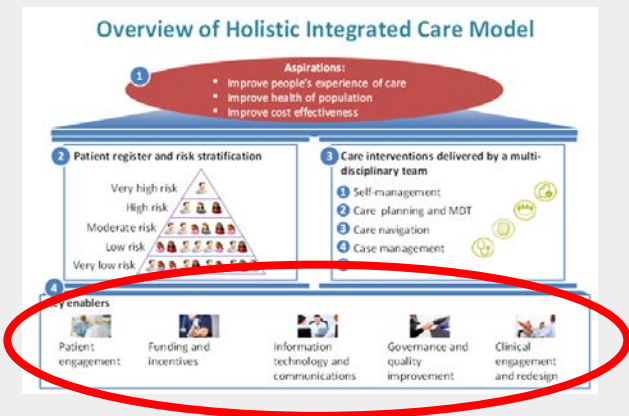

- Care Facilitators
- Specialist services focused on Integrated Care
- GP Support Line
- Training of primary care teams including case conferencing
- Better trained and supported primary care teams
- Links with other community services

Western Sydney Integrated Care Demonstration Project

Specialist Services

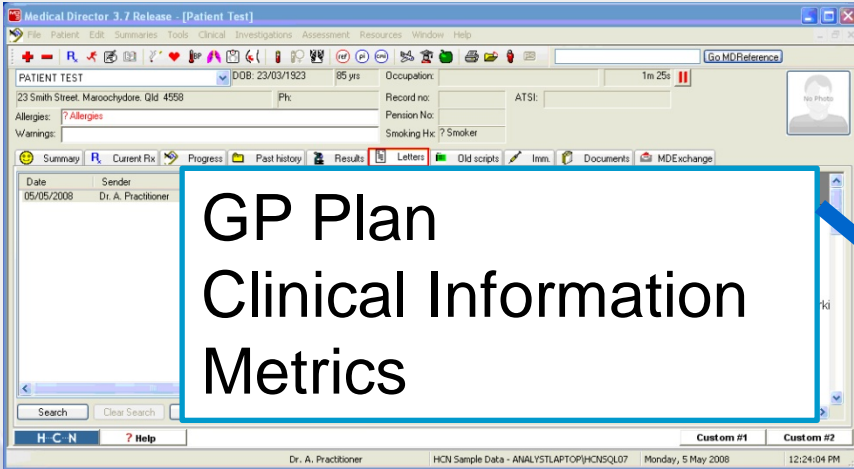

Enablers

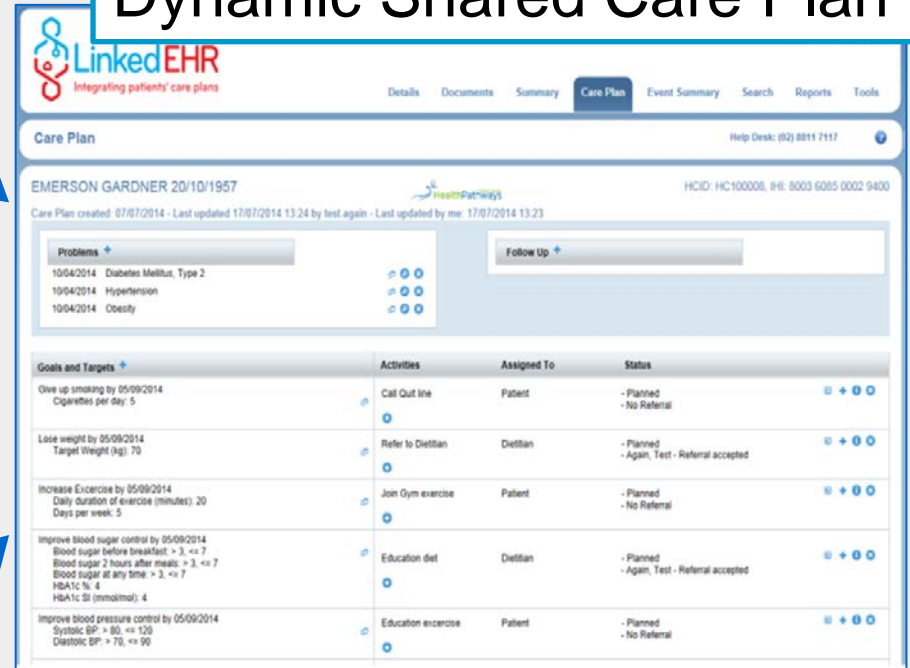

- E-Health strategy: Shared Care Plan
- Action Plan
- E-Referral
- E-Specialist Letters
- Healthpathways: shared protocols, targets
- Links with other community services
- Shared governance
- Consumer engagement
- Quality audits
- GP incentive funding

Shared Care Plan

 Care Plan created: 07/07/2014 - Last updated: 17/07/2014 13:24 by test again - Last updated by me: 17/07/2014 13:23

Problems
 10/04/2014 Diabetes Mellitus, Type 2
 10/04/2014 Hypertension
 10/04/2014 Obesity

Goals and Targets

Goals and Targets	Activities	Assigned To	Status
Give up smoking by 05/09/2014 Cigarettes per day: 5	Call Out line	Patient	- Planned - No Referral
Lose weight by 05/09/2014 Target Weight (kg): 70	Refer to Dietitian	Dietitian	- Planned - Agan. Test - Referral accepted
Increase Exercise by 05/09/2014 Daily duration of exercise (minutes): 20 Days per week: 5	Join Gym exercise	Patient	- Planned - No Referral
Improve blood sugar control by 05/09/2014 Blood sugar before breakfast: > 3, <= 7 Blood sugar 2 hours after meals: > 3, <= 7 Blood sugar at any time: > 3, <= 7 HbA1c %: 4 HbA1c (mmol/mol): 4	Education diet	Dietitian	- Planned - Agan. Test - Referral accepted
Improve blood pressure control by 05/09/2014 Systolic BP: > 90, <= 120 Diastolic BP: > 70, <= 90	Education exercise	Patient	- Planned - No Referral

Diabetes Shared Care Plan Protocol

 Indicates specific advice about Aboriginal and Torres Strait Islander people.

A key management requirement for **Integrated Care** patients is to have an up-to-date, **dynamic shared care plan** to direct best practice ongoing **care**.

This protocol provides the basis for the elements of a **Care Plan** that refer to managing a patient's diabetes.

Every consultation

1. Assess compliance with **diet** and **exercise**. Offer  [lifestyle modification programs](#).
2. Assess diabetes control:
 - Discuss **self-monitoring of blood glucose** and review blood sugar levels (BSLs)
 - Optimise **glycaemic control**.
 - Ask about **hypoglycaemic symptoms**. See also Diabetes NSW – [Hypoglycaemia](#).
3. Review medications, assess compliance, and adjust medication if needed (after reviewing blood sugar levels).
 - Discuss **oral hypoglycaemic agents (OHA)** and consider **insulin**. Do not delay if optimal management not being achieved with maximal oral therapy and lifestyle changes.
 - Review  [diabetogenic medications](#).
 - Consider the use of a statin and/or an ACE inhibitor as **per the guidelines**.
4. Check smoking status and encourage **smoking cessation** if relevant.
5. Calculate  **body mass index (BMI)** and  [interpret the result](#).
6. Measure  [waist circumference](#).

Every 3 months

If indications of poor control consider measuring HbA1c.

Every 6 months (depending on clinical condition)

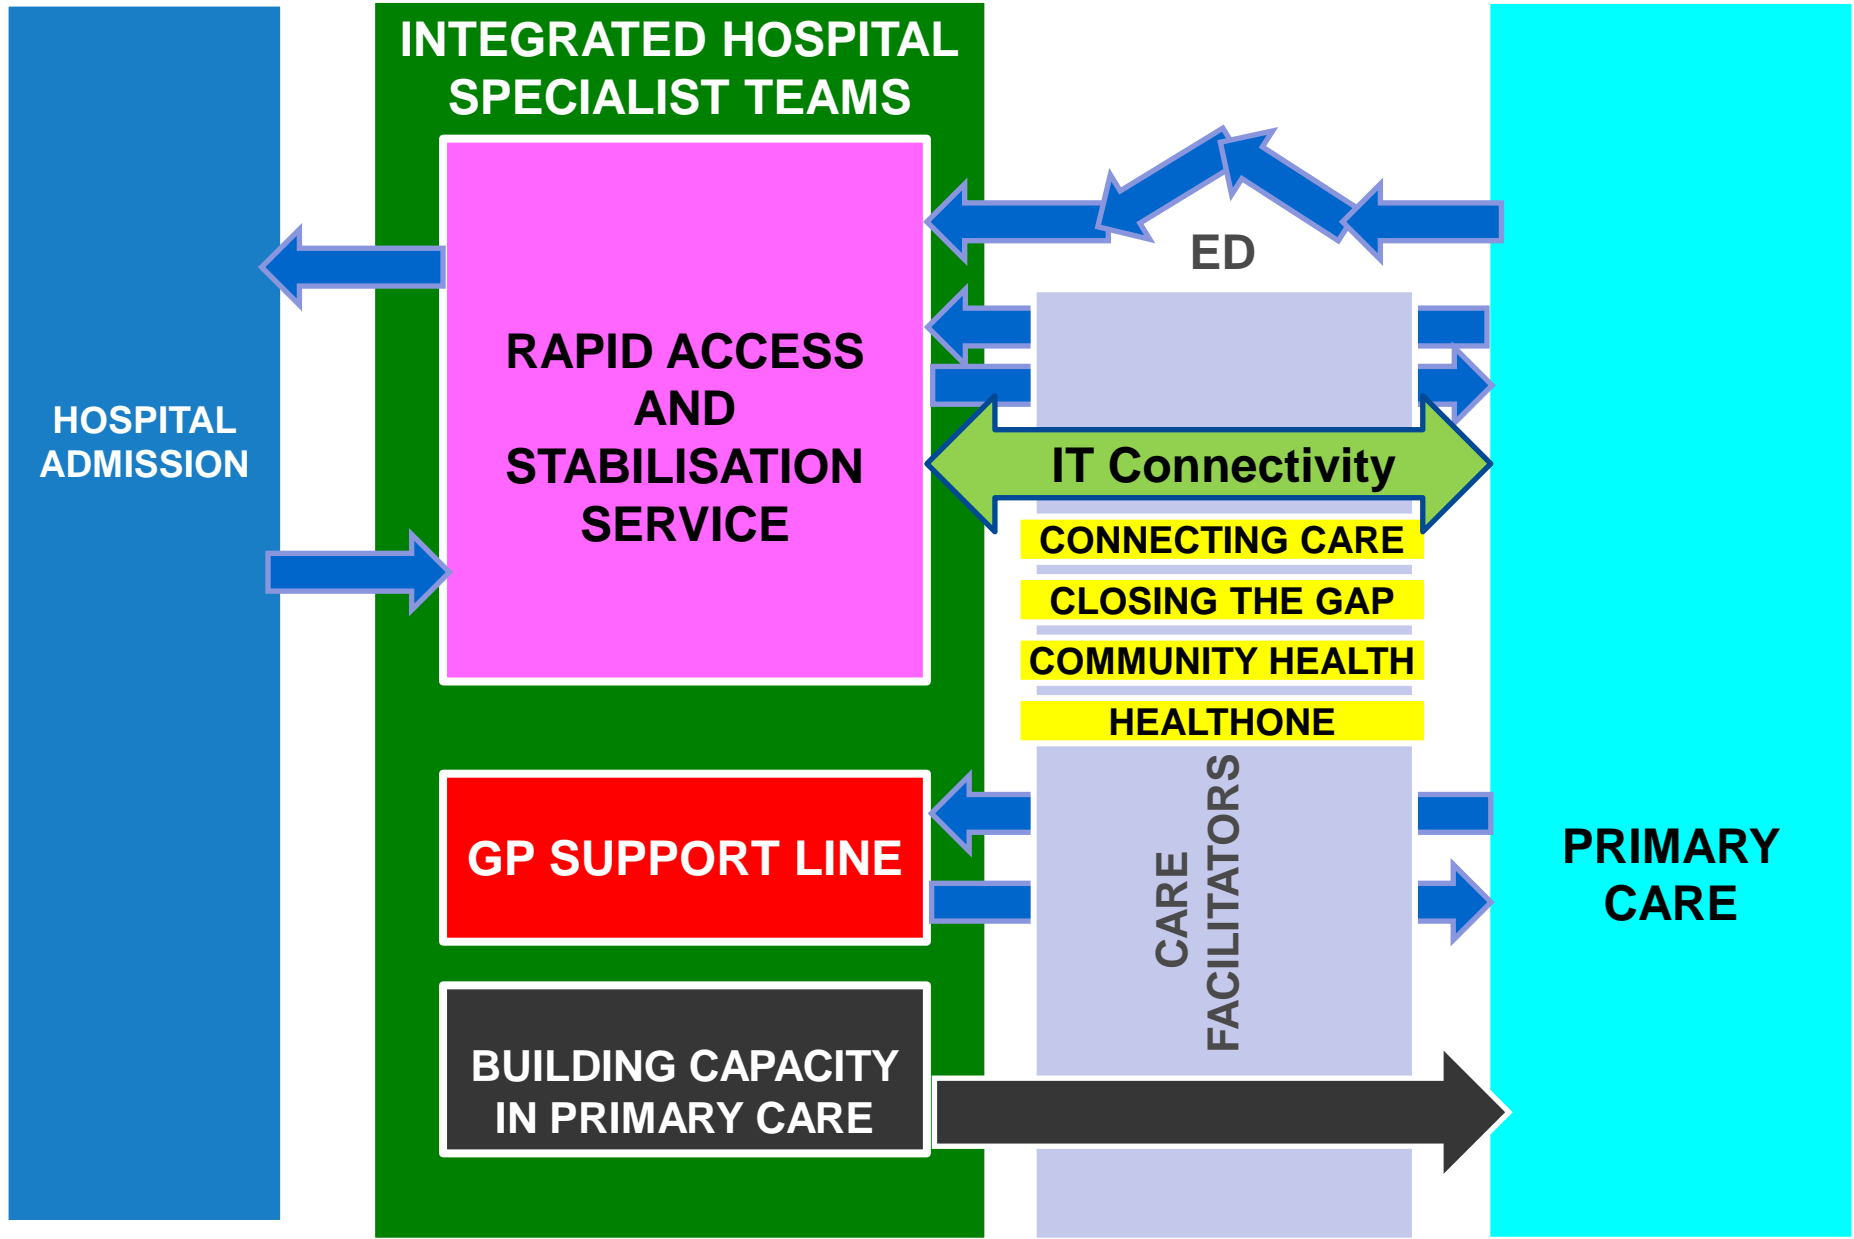

1. Measure HbA1c.
2. Measure  [blood pressure](#).

Current Status

- 67/320 General Practices participating
- 938 subjects enrolled
- 864 (92%) Linked eHR Shared Care Plan uploaded
- 2591 referrals to Rapid Access & Stabilisation
- 8939 occasions of service in RAS (Diabetes 3106)
- 50% seen within 2 days, 83% within 5 days
- 406 calls to GP Support Line

Next Steps

- Evaluation - Health services utilisation
 - Clinical outcomes
 - Quality of care
 - Consumer satisfaction
 - Consumer care experience
 - Service Provider satisfaction
- Wider Implementation
- Extend model to other chronic diseases
