International reflections

- Cases of COVID-19 are increasing in Australia, Canada, Israel, the United Kingdom and the United States.
- Omicron has now been detected in ~110 countries.1
- In the United States, a record number of hospitalisations has been reported, with over 132,000 currently on wards.2
- The UK NHS Confederation has called for the self-isolation period for people infected with COVID-19 to be shortened to five days, in line with the US and France.3
- In Australia, vaccinations for children aged 5 to 11 years began this week.4

*Please see Summary of public health: notes and sources at the end of this document.
COVID-19 daily confirmed cases

Figure 1 shows the daily rate per million population (rolling seven-day average) of confirmed COVID-19 cases in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from March 2020 to January 2022.

Figure 1: Daily rates of COVID-19 cases (select countries and NSW), March 2020 – January 2022

Note: Limited testing and delayed reporting likely result in underestimated actual number of confirmed cases. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

COVID-19 cumulative confirmed cases

Figure 2 shows the cumulative rate per million population of confirmed COVID-19 cases in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from March 2020 to January 2022.

**Figure 2: Cumulative confirmed COVID-19 cases per million population, (select countries and NSW), March 2020 – January 2022**

![Cumulative COVID-19 cases graph](image)

Note: Limited testing and delayed reporting likely result in underestimated actual number of confirmed cases. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

Weekly change in COVID-19 confirmed cases

Figure 3 shows the weekly percentage change of COVID-19 cases for NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from July 2021 to January 2022. The weekly change of COVID-19 cases on any given day is measured as the percentage change in the number of confirmed cases in the last seven days, compared with the number in the previous seven days.

**Figure 3: Weekly change in COVID-19 cases (select countries and NSW), July 2021 – January 2022**

Note: Limited testing and delayed reporting likely result in underestimation of the actual number of confirmed cases. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

COVID-19 daily mortality rates

Figure 4 shows the daily (rolling seven-day average) mortality rate per million population in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from July 2021 to January 2022.

Figure 4: Daily mortality rates (select countries and NSW), July 2021 – January 2022

Note: Limited testing and challenges in the attribution of the cause of death means the number of confirmed deaths may not be an accurate count of the true number of deaths from COVID-19. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

Source: Data for the selected countries sourced from Our World in Data. Data for NSW sourced from NSW Health via the Notifiable Conditions Information Management System. Both accessed 11 January 2022.
COVID-19 cumulative mortality rates

Figure 5 shows the cumulative mortality rate per million population in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from March 2020 to January 2022.

Figure 5: Cumulative mortality rates (select countries and NSW), March 2020 – January 2022

Note: Limited testing and challenges in the attribution of the cause of death means the number of confirmed deaths may not be an accurate count of the true number of deaths from COVID-19. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

Source: Data for the selected countries sourced from Our World in Data. Data for NSW sourced from NSW Health via the Notifiable Conditions Information Management System. Both accessed 11 January 2022.
Case fatality rate for COVID-19

Figure 6 shows the case fatality rate (moving average) of COVID-19 in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from July 2021 to January 2022. The moving average case fatality rate is calculated as the ratio between the 7-day average number of confirmed deaths and the 7-day average number of confirmed cases 10 days earlier.

Figure 6: Case fatality rate of COVID-19 (select countries and NSW), July 2021 – January 2022

Note: Limited testing and delayed reporting likely result in underestimated actual number of confirmed cases. Limited testing and challenges in the attribution of the cause of death means the number of confirmed deaths may not be an accurate count of the true number of deaths from COVID-19. Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

Source: Data for the selected countries sourced from Our World in Data. Data for NSW sourced from NSW Health via the Notifiable Conditions Information Management System. Both accessed 11 January 2022.
COVID-19 patients in hospital

Figure 7 shows the daily number of COVID-19 patients in hospital per million population in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from March 2020 to January 2022.

Figure 7: Number of COVID-19 patients in hospital (select countries and NSW), March 2020 – January 2022

Note: Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

COVID-19 patients in intensive care units

Figure 8 shows the daily number of COVID-19 patients in intensive care units per million population in NSW, Australia, United Kingdom, United States, Canada, Denmark and Israel, from March 2020 to January 2022.

Figure 8: Number of COVID-19 patients in intensive care units (select countries and NSW), March 2020 – January 2022

Note: Data for some countries may appear unstable at times (e.g. over the Christmas and New Year period) due to reasons such as reduced testing and unavailability of accurate data from the various countries.

COVID-19 cases, testing, variants, vaccines, hospitalisations and deaths*

The following graphs (figures 9 to 14) show COVID-19 cases and vaccination rates; hospitalisation and death rates; and the variant distribution for NSW, Australia, United Kingdom, United States, Canada and Israel.

Series a: COVID-19 cases and vaccinations

The graphs in series ‘a’ show COVID-19 cases and vaccination rates for NSW and each of these countries from March 2020 to January 2022. They include the:

- daily rate per million population (rolling seven-day average) of confirmed COVID-19 cases
- cumulative number of people who have received at least one vaccine dose (per 100 population)
- cumulative number of people double vaccinated (per 100 population).

These graphs should be interpreted with caution as there are other factors that may influence the number of cases in addition to vaccination rates, including the level of social restrictions.

The cumulative number of people vaccinated per hundred population (at least one dose or double vaccinated) is based on the full population (all ages) for all locations and countries, including NSW, to enable accurate comparability. At the time of reporting, Australia, Canada, Israel and the United States had commenced vaccinating children aged 5-11 years. The United Kingdom is vaccinating the 12+ population only.

Note, there is variation in both ‘x’ axis and ‘y’ axis scales, and some gaps in time series across these graphs due to missing data.

Series b: COVID-19 hospitalisation and death rates

The graphs in series ‘b’ show COVID-19 hospitalisation and death rates for NSW and each of these countries. Specifically, they show the daily number of hospitalised patients (per million population) and the daily number of new deaths (rolling seven-day average and per million population), from March 2020 to January 2022.

Note, there is variation in both ‘x’ axis and ‘y’ axis scales and some gaps in time series across these graphs due to missing data.

Series c: COVID-19 variant distribution

The stacked area graphs in series ‘c’ show the COVID-19 variant distribution for each of these countries. Specifically, they show COVID-19 variant distribution for cases sequenced, and the percentage of total COVID-19 cases sequenced, from July 2021 to January 2022.

For most countries, weekly counts are shown; however, only monthly counts were available for Canada.

Note, there is variation in both ‘x’ axis and ‘y’ axis scales and some gaps in time series across these graphs due to missing data.

*Please see further COVID-19 cases: notes and sources at the end of this document.

NSW key indicators

Notes
- Data are presented for all indicators as at 9 January 2022 (previous week, 2 January 2022), with data accessed on 11 January 2022.
- Average daily cases and average daily deaths are based on the seven days to 9 January 2022 (previous week, seven days to 2 January 2022).
- For any given day, the growth factor for COVID-19 cases is a ratio of cases notified in the seven days ending that day, to the cases notified in the seven days ending the day before.
- Patients in hospital include cases on the ward and in ICUs.
- Estimated per million population rates calculated using population estimates at 30 June 2021, based on the Australian Bureau of Statistics estimated resident population and population projections based on data from the NSW Department of Planning, Industry and Environment.\(^8\)
- Estimates for the full population and 12+ population figures used in calculating per million population rates for vaccination are drawn from NSW Health via the Australian Government Department of Health Australian Immunisation Register.\(^9\)
- The rate of hospitalisation and ICU admission (per million) among the unvaccinated population is calculated as the number of unvaccinated COVID-19 cases in hospital against the estimated total number of the unvaccinated population. The rate of hospitalisation and ICU admission (per million) among the vaccinated population is calculated as the number of COVID-19 cases in hospital who have received at least two doses of vaccination, against the estimated total number of the double vaccinated population. Rolling seven-day average was applied. Rates were age-standardised to NSW 2021 population estimates.

Sources
- New cases for NSW sourced from NSW Health via Notifiable Conditions Information Management System; accessed 11 January 2022.\(^6\)
- Vaccination data sourced from NSW Health via the Australian Government Department of Health Australian Immunisation Register; accessed 11 January 2022.\(^9\)
- Data for hospital capacity, admissions and proportion of vaccinated cases are sourced from NSW Health via the Patient Flow Portal and taken from a 7pm snapshot, 9 January 2022; accessed 11 January 2022.\(^7\)

Summary of public health, healthcare and vaccination measures (select countries, Canadian provinces and NSW)

Notes
- Data are presented for all indicators as at 9 January 2022. If unavailable, the latest available data are shown.
- Average daily confirmed cases and average daily deaths are based on a seven-day average.
- Proportions for the double vaccinated are based on the full population. Population figures to calculate proportion covered for NSW are drawn from NSW Health via the Australian Government Department of Health Australian Immunisation Register.\(^9\)
- For NSW, estimated per million population rates for all indicators other than vaccination are calculated using population estimates at 30 June 2021. This is based on the Australian Bureau of Statistics
estimated resident population and population projections, based on data from the NSW Department of Planning, Industry and Environment.  

- Patients in hospital include both cases on the ward and in ICUs. For Ontario and Quebec, patients in hospital may be lower than patients in ICU, as the in-hospital numbers only include people still testing positive for COVID-19, while patients in ICU also include those who are in ICU due to COVID-19 but have since tested negative.

- Cell colouring has been applied according to the following criteria:
  - For 7-day average cases per million, rates over 2,000 per million are highlighted in red, and the lowest three rates highlighted in green.
  - For 7-day average deaths per million, rates over 2.0 per million are highlighted in red, and rates under 0.5 per million are highlighted in green.
  - For percentage of total population double vaccinated, percentages greater than or equal to 75% are highlighted in green.
  - For patients in hospital per million, rates over 200 per million are highlighted in red, and the lowest three rates highlighted in green.
  - For patients in ICU per million, rates over 20 per million are highlighted in red, and the lowest three rates highlighted in green.

Sources

- New cases for selected countries sourced from Our World in Data. New cases for NSW sourced from NSW Health via the Notifiable Conditions Information Management System.  
  - New cases for Ontario and Quebec sourced from COVID-19 Tracker Canada. All accessed 11 January 2022.

- Vaccination data for selected countries sourced from Our World in Data. Vaccination data for NSW sourced from NSW Health via the Australian Government Department of Health Australian Immunisation Register. Vaccination data for Ontario and Quebec sourced from COVID-19 Tracker Canada. All accessed 11 January 2022.

- Data on the number of COVID-19 patients in hospital and ICUs were sourced on 11 January 2022 from:
  - Our World in Data for all countries (aside from Japan ICU data and Singapore)
  - Singapore Ministry of Health for Singapore
  - Japan Ministry of Health for Japan (ICU only)
  - NSW Health via the Patient Flow Portal for NSW, taken from a 7pm snapshot, 9 January 2022
  - COVID-19 Tracker Canada for Ontario and Quebec.
COVID-19 cases, variants, vaccines, hospitalisations and deaths

Notes

- With regards to the figures on COVID-19 variants, all severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) sequences were downloaded from the GISAID EpiCOV™ Database. PANGO lineage (variant) classification for each individual sequence was provided by GISAID.¹³

- Dates are based on the sample collection date. Sequences with dates specifying the year only were excluded, while collection dates specifying the year and month were assigned to the 15th of that month.

- Sequences with lengths ≤20,000 base pairs were removed from the analysis, as were non-human hosts.

- Only a non-random sample of cases are sequenced. For many countries, the proportion of cases sequenced and submitted to GISAID may be very low. As a result, this report does not indicate the true prevalence of the variants but rather a best estimate currently available. Furthermore, variant frequencies may differ from numbers reported in media releases which may be based on detection of the variant using faster alternate methodologies (such as PCR testing).

- All data used to generate these graphs is subject to the GISAID terms and conditions.¹⁴

Sources

- Data on variants enabled by GISAID; accessed 11 January 2022.¹³

- Data on total number of cases and vaccinations for the selected countries are sourced from Our World in Data; accessed 11 January 2022.⁵

- Data on total number of cases for NSW are sourced from NSW Health via the Notifiable Conditions Information Management System.⁶ Data on vaccinations for NSW are sourced from NSW Health via the Australian Government Department of Health Australian Immunisation Register.⁹ All accessed 11 January 2022.

- Data on the number of hospitalisations and new deaths for the selected countries were sourced from Our World in Data.⁵ Data on the number of hospitalisations for NSW were sourced from NSW Health via the Patient Flow Portal.⁷ Data on the number of deaths for NSW are sourced from NSW Health via the Notifiable Conditions Information Management System.⁶ All accessed 11 January 2022.

Method

The NSW Health COVID-19 Critical Intelligence Unit maintains living evidence tables on COVID-19 vaccines and SARS-CoV-2 variants.¹⁶,¹⁷ To inform this brief, a review of the daily evidence digest and Google searches were undertaken on 13 and 14 December 2021.

Countries were chosen based on contemporary relevance with regards to the variables of interest in the NSW and Australian context (cases, variants, vaccines and patient outcomes).
